Exercise: Importing

Goal

See advantages of using brewing package as an editable installation.

How

- Pull the newest commits of the ASPP repository into main.
  - you should see the setup.py file

- Check which packages are installed currently `pip freeze`

- install the brewing package as an editable installation `pip install -e <path-to-repository>`

- check which packages are installed now `pip freeze`

- try running the `importing_package.py` from whereever you had it last -> move it around (also inside the `brewing` folder) and run it
